EDUCATION

University of California, Berkeley

Expected May 2027

Bachelor's in Applied Mathematics (GPA: 3.422 / 4.0)

Berkeley, CA

- **Relevant Courses:** Foundations of Data Science, Linear Algebra & Diff Eqs, The Structure and Interpretation of Computer Programs

TECHNICAL SKILLS

Languages: Python, Java, SQL, HTML, JavaScript

Concepts: Full-Stack Web Development, REST API, Object Oriented Programming

EXPERIENCE

Unison Inc

June 2023 – Current

Accounting

Los Angeles, CA

- Developed a client-server interface through a managing website to facilitate communication between clients and employees
- Worked in a CPA office and as an accounting intern, filed client's Bank and C/C Statements, and learned to do bookkeeping
- Learned tax and business laws regarding different states and corporations
- Actively communicated with clients, learning how to open and close corporations

Korean Daily News

June 2022 – August 2022

Research Intern / Project Leader

Los Angeles, CA

- Created computer programs of video games using **Java** and **Python** while researching about game design.
- Led a team of 5 co-interns to develop a website that was composed of our research on game design to encourage involvement of students for different fields in technology
- Encouraged cooperation and communication between peers while setting short-term goals for different teammates

PROJECTS

Magnetic Keyboard | *Python*

- Collaborated with peers to create wireless magnetic keyboards which boasted a fast responsive input that possessed low latency
- Led back-end development of firmware using **Python** through coding language translators

Personal Project | *HTML, CSS*

- Designed a rock, paper, scissors website that allows users to play against computers while keeping track of scores
- Developed skills in web design using **CSS** while implementing full-stack development to create a user interface

Seaperch

- Created an underwater remote-controlled robot eligible for a national competition
- Researched about buoyancy and fluid-dynamics to utilize in our robot's design
- Learned technical skills with tools such as hammers, saws, and knives

LEADERSHIP

Computer Engineering and Technology Club

August 2021 - May 2023

- Planned lectures that taught a variety of technological skill-sets (3-D Printing, Computer Programming, etc.) to explore the various fields of engineering
- Collaborated with Robotics club to create computer programs for remote-controlled robots entered into competitions
